SUMMARY

Full Stack Software Engineer with 4 years of experience building and maintaining scalable microservices, RESTful APIs, and responsive user interfaces using Java, Spring Boot, Node.js, TypeScript, and Angular. Strong focus on automation testing across the stack — led a testing initiative raising code coverage from ~50% to 80% using JUnit, Cypress, Mocha, and QUnit, resolving ~50 critical platform issues in the process. Experienced with SQL and NoSQL databases, Git, CI/CD, and Agile development, with a track record of owning features end-to-end from design through implementation.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, SQL
Frontend: Angular, HTML5, CSS3
Backend & APIs: Node.js, Spring Boot, REST APIs, Microservices, Distributed Systems
Automation Testing: JUnit, Cypress, Mocha, Chai, QUnit, TestCafe
Database & DevOps: SQL, DynamoDB (NoSQL), Git, CI/CD, Docker, AWS (Lambda, DynamoDB)

WORK EXPERIENCE

Software Engineer — SAP Labs India Sep 2022 – Present

Java, Python, TypeScript, Node.js, Spring Boot, Angular, REST APIs, Microservices

- Architected REST APIs and backend microservices for Apache Spark deployment orchestration (versioning, rollbacks, deprecations), supporting 25+ concurrent heavy jobs per request
- Engineered a state-machine-driven deployment engine with multipart streaming upload and stuck-state reconciliation for long-running distributed workflows
- Built fault-tolerant webhook/callback job tracking with polling fallback, orphan detection, and 5-retry exponential backoff, eliminating resource leaks across crash/restart scenarios
- Enforced zero-trust security via hybrid JWT + mTLS authentication with privilege-scoped RBAC and audit trail logging for enterprise compliance
- Developed an end-to-end Find & Replace feature spanning backend and SAP UI5 frontend — owned it fully from design through implementation
- Spearheaded a testing initiative raising code coverage from ~50% to 80% using JUnit and Cypress; resolved ~50 critical platform issues impacting reliability
- Shipped 15+ full-stack features and validation workflows using Spring Boot and Angular
- Diagnosed a critical data corruption issue affecting 210+ production records and authored targeted Flyway/SQL migration scripts to repair the corrupted data
- Built microservice health check APIs classifying failures across 5+ downstream dependencies
- Used AI-assisted development tools (Copilot, Claude Code) to accelerate prototyping, code generation, and debugging, while validating and hardening outputs to production-grade quality
- Increased regression test coverage by ~40% using JUnit and QUnit automated test suites

PROJECTS

AI Resume Analyzer

Node.js, Express, Groq API, JWT, PostgreSQL

- Built a full-stack web app that analyses resumes against job descriptions using Llama 3.3 70B via Groq API.
- Implemented PDF parsing and AI-powered ATS compatibility scoring with keyword match breakdown and improvement suggestions.
- Added a resume tailoring feature that rewrites weak bullet points to match a JD without fabricating experience.
- Designed JWT-based user authentication with per-user analysis history showed in PostgreSQL.

EDUCATION

MTech in Software Engineering — BITS Pilani (CGPA: 8.9) 2022 – 2026
Bachelor of Computer Applications — IEM, Kolkata (CGPA: 9.75) 2019 – 2022

CERTIFICATIONS

Node.js Essential Training · End-to-End JS Testing with Cypress.io · AWS for Developers: DynamoDB — LinkedIn Learning
